

A PROUD HERITAGE OF EXPERIENCE AND QUALITY

EL-300TS Dual-Zone Wine Cooler

EL-300TS

Stock-up and store all your favorite wine bottles with the Vinotemp Dual-Zone Wine Cooler. Outfitted with 9 Ouzo™ sliding wire racks with black lip, this wine refrigerator can hold comfortably approximately 270-300 of your preferred choice of red, white, or sparkling wines with 2 separate cooling zones and a bulk storage section at the bottom. (Please note racks cannot slide out if double stacked) The touchscreen temperature controls are located at the top of the door so you can easily control the conditions for preserving and aging all wine (39-65°F) with minimized temperature fluctuations from opening the door. The SmartZn™ feature gives you the ability to store your wines at the same exact temperature throughout both zones, or it can be set up to store your different style of wines at two separate temperatures. The sleek dual-paned glass door allows you to view your collection with beautiful built-in BioBlue™ LED lighting. Our advanced compressor cooling technology comes equipped with a PTC heater so your wine can be properly stored in all ambient temperature settings including both hot and cold environments. A front exhaust allows the wine cellar to be built-in or free-standing to fit the requirements for your installation needs.
