

Wine-Mate 8500DS Packaged Central-Ducted Cooling System

The Wine-Mate ducted cooling system is designed and used to provide a stable temperature between 50~65°F for a properly insulated room at a normal environment. The wine room space will maintain humidity of 50~75% RH even when the environment becomes dry or humid. These temperatures and humidities are ideal for the long term storage of wine, fur and tobacco. Our packaged self-contained ducted DS cooling systems are 100% fully ducted, which can be ducted on cold side (evaporator) and hot side (condenser). DS can be installed in basement, garage, attic and roof. Ducted cooling systems are designed for both outdoor and indoor installation to cut down noise. DS is packaged, self-contained and ready to use. No additional piping is required.

Key Features

- Adjustable temperature control between 50~65°F
- Back-curved impeller fans for 50 ft. long duct use
- This unit can vent outdoors
- 100% fully ducted
- Digital temperature controller with automatic defrost cycle
- Long-lasting, reliable and manufactured to the highest quality standards

Specifications

Cellar Size:	2000 cu ft
Btu/h, CFM:	8500 Btu/h, 750 CFM
Decibel Rating:	65 dBA for cooling unit, 45 dBA for cabinet
Dimensions:	45"W x 34"D x 25"H
Electrical:	115V/60Hz/17A
Exhaust:	Rear (standard)
Weight:	220 lbs
Thermostat:	Advanced Digital Control Display
