FOR IMMEDIATE RELEASE

NEW BRAMA BY VINOTEMP MICROWAVE OVENS ADD VERSATILITY AND CONVENIENCE TO THE KITCHEN

Sleek design, navigable interfaces, and a variety of smart cooking options make the Brama Over the Range Microwave and the Brama Built-In Microwave ideal solutions for quick, convenient cooking.

Henderson, Nevada (September 24, 2020) – [Vinotemp](http://Vinotemp.com)®, the leading wine storage solutions and appliance provider, today announced the addition of two microwave ovens to its appliance line, [Brama by Vinotemp](http://BramaByVinotemp.com). Both the over-the-range option along with the built-in or counter-top option offer modern design aesthetic, navigable interfaces and a variety of cooking options including a smart, Sensor Cook function.

"The ability to offer a full suite of kitchen appliances coupled with the continued growth of the microwave cookware segment drove our decision to add microwave ovens to our line of Brama appliances," states India Hynes, CEO of Vinotemp. "And by offering both an over-the-range microwave and a built-in or counter-top microwave, we're providing options when it comes to adding versatility and convenience to the kitchen."

The [Brama Over the Range Microwave](http://BramaOvertheRangeMicrowave.com) (1.6 cubic feet, 1000 watt) features surface (task) lighting along with a two-speed exhaust fan, while the [Brama Built-In Microwave](http://BramaBuiltInMicrowave.com) (2.2 cubic feet, 1200 watt) includes a memory function that saves the desired power level and time for up to three items that are most often heated/cooked. Both options offer:

- **Sensor Cook Function**

When this smart function is selected, sensors inside the microwave work to detect humidity released by items being cooked, and the data is used to automatically adjust the optimal cooking time.

- **Multi-stage Cooking**

For the best results when using a microwave to cook, different power levels at different lengths of time may be necessary. The Multi-stage Cooking functionality allows the microwave to automatically change from one stage to another.

- **Ten Power Levels**

From softening butter and thawing meats to baking cakes, cooking pasta, scrambling eggs, sautéing onions, boiling water, making candy and cooking meats, a variety of power levels work to efficiently heat and/or cook almost anything.
